YEAR: 2026	GUEST CABINS: 4	reinforcements	LOCATION:
	CREW CABINS: 2	LENGHT: 26.54 m - 87,1 ft	Finland

The Swan 88 is a high-performance sailing yacht designed for owners who demand speed, precision and versatility without compromising comfort. Scheduled for delivery in Summer 2026, she is conceived for fast cruising, offshore passages and competitive sailing at the highest level.

SUMMER 2026

Designed by Germán Frers, she features a powerful monohull built in Corecell M-grade cored carbon fibre with SPRINT reinforcements, ensuring exceptional stiffness, strength and reduced weight. Her telescopic keel offers a variable draft of 3.0 to 4.6 metres, delivering maximum versatility with reduced draft for coastal navigation and full-depth configuration for optimal offshore performance.

INSIDE LAYOUT

The interior layout places the owner's cabin aft, ensuring privacy and optimal use of space, while the overall engineering reflects a strong focus on structural efficiency, hydrodynamic balance and precise sail control, making her equally capable of short-handed racing and high-speed bluewater cruising.
